Press Release

eInstruction will present at eLearning Africa (Booth 53).

eInstruction will present at e-Learning Africa the Next Generation of Interactive Classroom Technology

Interwrite Dualboard and Interwrite Mobi™ System

[eInstruction™](#), a premier global provider of interactive learning solutions, unveils a breakthrough in interactive teaching with the release of the new **Interwrite Dualboard**, the first operational dual pen interactive whiteboard to hit the market and **the Interwrite Mobi System**, the industry's first multi-user, multi-tablet system.

The new **Interwrite DualBoard** has the same durable and easy-to-use features that made its predecessor, the Interwrite® Board, a favorite among educators worldwide, as well as the enhanced capability to recognize and interpret information from *two interactive pens concurrently*.

Existing Interwrite Boards can be upgraded with this functionality. Interwrite Board users will be able to purchase an upgrade kit that replaces their current controller and provides the second pen for the dual pen functionality.

The **Mobi System** supports student-centered, collaborative learning where both teacher and students can concurrently interact with and contribute to the same digital content from team activities to learning simulations to interactive lessons. Also a first, Mobi's built-in color LCD display reports student responses instantly, making it easy for teachers to identify students that need special attention or topics that require re-teaching.

The Mobi System includes the Interwrite Mobi tablet (for teachers), two Interwrite Mobi Learner tablets (for students), Mobi Dock (charging & security station) and Interwrite Workspace® 8.0 software.

In place of the color LCD screen, the Mobi Learner features a three line black and white screen that provides status information including battery level and connection strength.

The **Mobi System** also features an instant-connect wireless technology that allows multiple Mobi users to work simultaneously in the same classroom. What's more, each student can have their own Mobi and as many as nine Mobi tablets can concurrently interact with and contribute information to the same Workspace page, creating a powerful shared learning environment for lessons and activities.

Interwrite Workspace 8.0 is a revolutionary instructional and multi-user collaboration software package that combines ease-of-use, multi-user input to provide a superior collaborative instructional experience. Teachers can select from a "sandbox" mode or "split screen" mode, providing almost unlimited ways for the class to collaborate around digital lesson materials. Sandbox mode allows all students to work in the same display area, while split screen mode allows the teacher to assign each student to a separate portion of the display area. Workspace 8 is also compatible with assessment content from over 6,000 textbooks.

Availability:

The Mobi, Mobi Learner and Mobi System are now shipping and will be available through eInstruction's educational consultants and select authorized resellers.

###

About eInstruction™

eInstruction pioneered the first student response system for the education market during the 1980s. Its Classroom Performance System (CPS) provides instructors and students with real-time feedback on comprehension during instruction. Today CPS remains the leading student response system in education, being used by millions of students, teachers and professors in 400,000 K-12 classrooms and at more than 1,300 higher education institutions worldwide. In 2006, eInstruction acquired FSCreations and integrated its ExamView® and Learning Series content into CPS; so instructors can seamlessly use publisher and proprietary question banks in lesson plans, quizzes and tests with eInstruction technology. The result is an integrated system for instruction and assessment with real-time feedback. In 2008, eInstruction joined forces with Interwrite Learning®, another premier global provider of interactive learning solutions to the primary, secondary and higher education markets.

eInstruction will be present at eLearning Africa (Booth 53).
