

MARSDEN GRANT UK. CLEVERBOARD.

The British directors of Marsden Grant UK, a London-based organisation, will be demonstrating their acclaimed digital interactive classroom whiteboard, **CleverBoard**.

Today, teachers get to their digital-native pupils not by trying to be teenagers themselves but by finding ways to communicate the subjects they are presenting in a medium that sparks and stimulates the pupils' imagination, collaboration and engagement. That medium is digital.

Consequently, the greatest support that a school can provide to its teachers is to install digital interactive whiteboards in their classrooms so their teachers can access the vast wealth of available lesson planning resources and learning materials designed for educational digital presentation.

Our digital **CleverBoard** replaces old-style ink wipe boards and blackboards, works with all digital software and comes fully equipped with lesson planning software and a unique 30 years guarantee which eliminates all concerns over after-sales cost. It's the hardest wearing, most reliable, easiest-to-use digital interactive board in the market.

For schools across Africa, CleverBoard has two extra unique features. First its sealed-unit technology is unaffected by heat or humidity. Second, CleverBoard does not need power to operate.

CleverBoard is low-priced thereby allowing all schools the opportunity of purchasing and using its resources and facilities.

Schools can see CleverBoard in action in the conference's exhibition and reach us by email at mgi@marsdengrant.com. Chris Ogilvie-Taylor, the company's Managing Director, will be in attendance during the conference. If you would like to interview him, please contact us by email or come to the company's exhibition stand.

Marsden Grant also have a number of distributor vacancies across Africa so companies already providing goods or services to schools may apply to distribute CleverBoard.
