

Lucas-Nülle GmbH shows its colours

As one of the world's leading companies developing, manufacturing and selling technical training systems for careers in all fields of electrical engineering, Lucas-Nülle has spent 30 years following a consistent policy of offering innovative training systems for schools, colleges and vocational training establishments. Lucas-Nülle training systems are used for vocational training in more than 100 countries. About 80% of the equipment produced goes for export.

The equipment is devised at the firm's headquarters in Kerpen near Cologne, Germany and is then honed in consultation with companies working in the relevant industries and with various educational and vocational training institutes, so that it is measured against the latest standards and practices, and then modified to meet the latest needs of industry. Thus, Lucas-Nülle's equipment is always able to keep up with the rapid changes arising from continued research and development in industry.

Lucas-Nülle training equipment includes the blended-learning system UniTrain-I, which covers a full range of topics in electrical engineering, CarTrain for Automotive Training, InsTrain for wiring installations, IMS® for mechatronics training and the MCLS-modular® system that can be used introduce trainees and students to the programming of microprocessors. All this training equipment is characterised by a multimedia-enhanced educational concept to allow self-learning and to encourage the use of blended-learning in vocational training courses.
